ABSTRACT

This home economics guide, for use at the secondary level, is one of a series of guides, K-12, that were developed by teachers to help introduce environmental education into the total curriculum. The guides are supplementary in design, containing a series of episodes that develop a sense of family and personal responsibility toward the environment and help the student learn to use and preserve natural resources. The episodes are built around 12 major environmental concepts that form a framework for each grade or subject area, as well as for the entire K-12 program. Although the same concepts are used throughout the K-12 program, emphasis is placed on different aspects of each concept at different grade levels or subject levels. This guide focuses on aspects such as the consumer, housing, and family living. The 12 concepts are covered in one of the episodes contained in the guide. Further, each episode offers subject area integration, subject area activities, interdisciplinary activities, cognitive affective behavioral objectives, and suggested references and resource materials useful to teachers and students. HOME ECONOMICS PREFACE

Families have and always will live in the environment. The family is the basic consuming and living unit within society. Students in home economics learning to use and preserve resources are also learning family responsibility. Ultimately the necessary, daily, individual acts are the family's contribution to valuing and saving the environment. We feel that it is our responsibility as home economists to instill in our student respect for the environment, so that future children will be able to enjoy the woods, waters, and other wonders we presently enjoy.

We have many ways to emphasize the environment while teaching basic home economics concepts. Students may visit the sewage treatment plant to see how wastes from the garbage disposal and other home wastes affect the water supply; compile, save and separate wastes from labs to determine a small measure of the waste problem; calculate the amount of electricity different home appliances use; or play a simulation game on community planning. These are just a few examples. On the following pages you will find more learning experiences, methods, and materials.

Remember, from a small acorn, mighty oaks grow.

In 1969, the First Environmental Quality Education Act was proposed in the United States Congress. At the time of the introduction of that legislation, I stated:

"There is a dire need to improve the understanding by Americans of the ominous deterioration of the Nation's environment and the increasing threat of irreversible ecological catastrophe. We must all become stewards for the preservation of life on our resource-deficient planet."

In the three years since the Environmental Education Act was passed by the Congress, much has happened in the United States to reinforce the great need for effective environmental education for the Nation's young people. The intensive concern over adequate energy resources, the continuing degradation of our air and water, and the discussion over the economic costs of the war against pollution have all brought the question of the environmental quality of this nation to a concern not merely of aesthetics but of the survival of the human race.

The intense interest by the public in the quality of our lives

as affected by the environment clearly indicates that we cannot just use incentives and prescriptions to industry and other sources of pollution. That is necessary, but not sufficient." The race between education and catastrophe can be won by education if we marshal our resources in a systematic manner and squarely confront the long-term approach to saving our environment through the process of education.

As the incessant conqueror of nature, we must reexamine our place and role. Our world is no longer an endless frontier. We constantly are feeling the backlash from many of our ill-conceived efforts to achieve progress.

Rachel Carson's theme of "reverence for life" is becoming less mystical and of more substance as our eyes are opened to much of the havoc we have wrought under the guise of progress. A strong commitment to an all-embracing program of environmental education will help us to find that new working definition of progress that is a pre-requisite to the continued presence of life on this planet.

- Senator Gaylord Nelson

DIRECTIONS FOR USING THIS GUIDE

This guide contains a series of episodes (mini-lesson plans), each containing a number of suggested in and out of class learning activities. The episodes are built around 12 major environmental concepts that form a framework for each grade or subject area, as well as for the entire K-12 program. Further, each episode offers subject area integration, multidisciplinary activities, where applicable, both cognitive and affective behavioral objectives and suggested reference and resource materials useful to the teacher and students.

1. This I-C-E guide is supplementary in design--it is not a complete course of study, nor is its arrangement sequential. You can teach environmentally within the context of your course of study or units by integrating the many ideas and activities suggested.
2. The suggested learning activities are departures from regular text or curriculum programs, while providing for skill development.

3. You decide when any concepts, objectives, activities and resources can conveniently be included in your unit.

4. All episodes can be adapted, modified, or expanded thereby providing great flexibility for any teaching situation.

5. While each grade level or subject area has its own topic or unit emphasis, inter-grade coordination or subject area articulation to avoid duplication and overlap is highly recommended for any school or district seeking effective implementation.

This total K-12 environmental education series is the product of 235 classroom teachers from Northeastern Wisconsin. They created, used, revised and edited these guides over a period of four years. To this first step in the 1,000 mile journey of human survival, we invite you to take the second step--by using this guide and by adding your own inspirations along the way.

PROJECT I-C-E TWELVE MAJOR ENVIRONMENTAL CONCEPTS

1. The sun is the basic source of energy on earth. Transformation of sun energy to other energy forms (often begun by plant photosynthesis) provides food, fuel and power for life systems and machines.
2. All living organisms interact among themselves and their environment, forming an intricate unit called an ecosystem.
3. Environmental factors are limiting on the numbers of organisms living within their influence. Thus, each ecosystem has a carrying capacity.
4. An adequate supply of clean water is essential to life.
5. An adequate supply of clean air is essential for life.
6. The distribution of natural resources and the interaction of physical environmental factors greatly affect the quality of life.
7. Factors such as facilitating transportation, economic conditions, population growth and increased leisure time influence changes in land use and population densities.
8. Cultural, economic, social, and political factors determine man's values and attitudes toward his environment.
9. Man has the ability to manage, manipulate and change his environment.
10. Short-term economic gains may produce long-term environmental losses.
11. Individual acts, duplicated or compounded, produce significant environmental alterations over time.
12. Each person must exercise stewardship of the earth for the benefit of mankind.

A "Concept Rationale" booklet and a slide/tape program "Man Needs His Environment" are available from the I-C-E RMC to more fully explain these concepts.

ACKNOWLEDGEMENT

The interest and dedicated effort of the following teachers from Wisconsin Area "B" has led to the development of the Project I-C-E Environmental Education K-12 series:

Environmental: CONCEPT NO. <u>4 - Water</u> ORIENTATION <u>Water Resources</u>		Integrated with: UNIFYING AREA <u>Management of Personal and Family</u> SUBSTANTIVE AREA <u>Housing</u> Resources	
BEHAVIORAL OBJECTIVES		STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive: Comprehends the effect of household water consumption on environment.		In-Class: A. Students list all appliances in the home which use water. 1. Compare the amount of water used in various types of washing machines, floor scrubbers, humidifiers, dishwashers, etc. 2. Students note the amount of water used in the family washing machine for one week and calculate the amount which could be saved by running only full loads or using a suds saver. B. Students introduce small amounts of algae into beakers of water and add varying amounts of phosphorous to discover how phosphate detergent waste affects the environment. Students list recommendations for conserving water in the household by using appliances with care.	Outside or Community: A. County Extension agent to talk about methods of conserving water in the home. Appliance dealers to talk about water use and features of different water using appliances in the home.
Affective: Develops a personal plan in the use of household water.		Skills Used: 1. Comparing 2. Computing 3. Reporting 4. Drawing conclusions

BEHAVIORAL OBJECTIVES		STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive:		In-Class:	Outside or Community:
Infers the role the availability of resources plays on the quality of family life.	Affective: Appreciates the role the availability of resources plays on the quality of family life.	A. Students research and list family kitchen equipment in ancient, medieval, pioneer and modern kitchens. Example - 1. Ancient - bowl and mortar 2. Pioneer - cast iron pan 3. Modern - dishwasher, electric percolator	A. Speaker from State Historical Society. B. Speaker from museum. C. English teacher to discuss possible "essay forms" or to correct essays - with credit for Home Ec. and credit for English.
		B. Students make a bulletin board of types of outside construction of homes in different parts of the world and discuss the natural resources needed to make these homes. Example - 1. Paper house - Japan 2. Wood - U.S. 3. Adobe - Mexico 4. Stone - Europe	
		C. Students role play a typical day's activities in different historical eras. Example - 1. Ancient - women gather berries, roots, etc. skins and cleans husband's "catch," cooks, washes clothes in river and tends the fire. 2. Modern - woman puts toast in toaster, plugs in coffee, curls hair with electric curlers, etc.	
Skills Used: 1. Researching 2. Listing 3. Graphic illustration 4. Role playing 5. Writing

BEHAVIORAL OBJECTIVES		STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive:		In-Class:	Outside or Community:
Evaluate the effect short-term economic gains have on long-term environmental losses and their relationship to the family.		A. List individual short-term and long-term goals. (Ex. - Short-term goal: engagement ring. Long-term goals: advanced education, new car.) B. List 25 favorite activities and determine whether or not activities are helping to achieve short-term or long-term goals. 1. Students make line graph using these factors in determining achievement of goals. a. Time b. Cost c. Recurrence d. Energy C. Identify economic goals in case studies. D. Students write situations that are economically inexpensive now but costly to environment in the long run. Story building - 3 parts. E. Examples: 1. Paper plates vs. dishes 2. Pollution vs. recycling (Continued)	A. Interview community business, political, etc. persons to determine short-term economic gain that would result in long-term environment losses. Sample questions: 1. What are your specific economic goals? 2. What are some methods you could employ to achieve economic goals? 3. Do you see your business or industry as having any effect on the environment? What are some things you could do to achieve short-term economic gain which would result in long-term environmental losses? 5. Do you see your business as having any effect on family life? 6. Do family considerations have any effect on your hiring or firing policies? Students use answers as a stimulus for discussion and student-teacher analysis.
Affective: Judges actions based on long-term environmental effects.			
Skills Used: 1. Decision making. 2. Party planning. 3. Interviewing techniques. 4. Identification of goals.

BEHAVIORAL OBJECTIVES

STUDENT-CENTERED LEARNING ACTIVITIES

Cognitive:

In-Class:

Outside or Community:

Applies stewardship principles when using electrical appliances so resources will be available for future generations.

Affective:

Believes in the importance of conserving electricity.

Skills Used:

1. Defining
2. Listening
3. Demonstrations
4. Interviewing
5. Writing

A. Students define and discuss stewardship.

B. Students listen to guest speaker speaking on electrical capacity of homes (circuits).

C. Students give oral reports and lab demonstrations on various home appliances (include voltage requirements).

D. Students interview parents or others and/or read articles on electrical blackouts and electrical rationing.

E. Students write editorials and/or 25, 50 and 100 years from now articles on conserving electricity and the possible results of not conserving electricity.

F. Students take amp readings off of three home appliances and figure the amount of electricity used and the cost.

Amps x Volts = Watts
Watt 1000 x kilowatts
kilowatt x electrical co.'s charge =
cost of running the appliance

A. Wisconsin Public Service or electric company area representative and/or electrician to speak on electrical capacity in homes.

B. Appliance salesman to speak about new types of appliances coming on market and amount of resources the new appliances consume.

The student analyzes methods of managing, manipulating, or changing personal actions in problem situations.

Affective:

The student develops a plan to manage, manipulate, or change personal actions in problem situations.

Skills Used:

- 1. Problem solving
- 2. Recording in diary
- 3. Critical thinking

A. Open ended statements

1. Students answer open ended questions

- a. Stench.....
- b. High noise level.....
- c. Polluted water.....
- d. Littered parks and beaches.....

2. Students write their solutions to above situations.

B. Students discuss how they would react to following situations.

- 1. Fellow asks for date, promises to come at 7:00 and doesn't come until 10:00. How do you react?
- 2. Fellow takes you to a dance and dances with your best friend all evening. How do you react?
- 3. Gal leads fellow on without commitment; he has asked her to marry him. How would fellow react?
- 4. Friend throws a returnable pop bottle on the parkway each night after school. How would fellow react?
- How does gal feel?

A. Person from Division of Family Services, minister or priest.

- 1. Speak to students on methods of problem solving.

B. Representative from MENSA

- 1. Speak on how mental attitudes affect problem solving.

C. Representative from recycling project speaks on how the average homemaker can help preserve the environment through recycling wastes.

film, Guidance Assoc.

Community:

Local Division of Family Services.
Minister.
Priest.
Social worker.
Speech teacher.

CONTINUED OR ADDED LEARNING ACTIVITIES

In-Class: (Continued)

- C. 3. Students act out situation in which mother allows daughter to have the car to go shopping without consulting father and obviously is perturbed.
4. Students act out situation in which husband and wife argue over responsibilities in relation to garbage disposal.
- D. Students act out the above situations paying careful attention to communications.
 1. Wife notices husband had a bad day and quietly brings him his paper and leaves him alone for a while.
 2. Women meet in grocery store and one is in a hurry. The other notices this and says she will quit talking, but call at the end of the week.
 3. Mother consults father about allowing daughter to have car.
 4. Husband and wife talk about responsibilities and decide to remove garbage on alternating months.
- E. Students and teacher establish parallels between biological and family ecosystem.
 1. Example: Variety and Diversity
Variety of plants in forest keeps forest strong and variety of forms of communication in the family keeps the family strong and interesting.
 2. Interdependency and Dependency
Food chain interdependent in nature. Mother and child interdependent in family. (Mother must appeal to child mentally, emotionally; child has the responsibility to listen and anticipate.)
 3. Change and Adaptability
Nature (evolution) is changing to survive life, death, growth. Underground family - members constantly must change the way they communicate. Children increase vocabulary and are expected to say more.
 4. Pattern and Similarities
Nature follows patterns. Family members and families follow communication patterns in both form and content (facts, argumentation). Grocery store pattern - small talk. Wedding - don't give eulogy. Audience - speak differently to child than adult.

Environmental: CONCEPT NO. <u>11 - Individual Acts</u> ORIENTATION <u>Over-population vs. Family Planning</u>		<i>Integrated with:</i> UNIFYING AREA <u>Human Growth & Development</u> SUBSTANTIVE AREA <u>Family Living</u>	
BEHAVIORAL OBJECTIVES		STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive: Analyzes relationship of individual acts related to family planning and environmental alterations.		In-Class:	Outside or Community:
Affective: Forms a judgment concerning responsibility of determining family size.		A. Collect and read related newspaper and magazine articles concerning family planning and over-population. B. Discuss environmental alterations as affected by over-population. C. View and discuss film, <u>Family Planning</u> in terms of effects on family life. D. List factors to be considered in family planning. 1. Economic 2. Social 3. Environmental E. Dramatize mock court case on future family size. 1. Students set up possible future laws (Ex. - taxing more than two children, sterilization after five children). 2. Students set up court and punish families who disobey laws. F. Identify position on continuum related to family size.	A. Family service counselor and/or Children's Service Society to speak on effect of family planning on family life. B. Zero Population Growth member and/or Planned Parenthood Assn. member to speak on the effect of over-population on the environment. C. School nurse, public health nurse or local doctor to speak on the effect of family planning on health of child and mother.
Skills Used: 1. Identifies outside agencies and resources that might help family. 2. Draws conclusions 3. Supports opinions 4. Interviewing techniques 5. Critical thinking		(Continued)

Cognitive:

In-Class:

Outside or Community:

Applies principles of safety and first aid to manage, manipulate and/or change the family or home environment.

Affective:

Complies with principles of safety and first aid to manage, manipulate and/or change the family or home environment.

Skills Used:

1. First aid techniques
2. Dramatization
3. Observation
4. Graphic illustration
5. Research
6. Listening

A. Students look around home, Home Ed. area, school or on way to school for safety hazards.

A. Speakers such as public health nurse, school nurse, Phy. Ed. teacher, Red Cross or first aid instructors, or fire department.

B. Students compile safety hazard list and arrange on flannel board or tagboard.

B. Students volunteer to advocate safety principles. (Hammy student to put on skit such as carnival caller stressing safety principles.)

C. Students design posters illustrating safety slogans for school safety campaign. (Ex. - Water skiing is fun but not in the school hallway. Picture of student or child slipping on floor--put near the bubbler).

D. Pretest--using two sets of index cards--one set with the injury; the second set with the treatment. Pass both sets out to class, each student receiving one card. Students match treatment with injury.

E. Have local fire dept. personnel give presentation on basic safety and first aid techniques.

F. Students research and practice first aid techniques on each other.

G. Role-play child care situations involving accidents.

G. Perform proper first aid. Indicate how accident could have been avoided.

H. Post-test - using index cards as before.
